

Assignment No-II

Que 1) Write SQL queries in Oracle that demonstrate use of all TCL statements.

(COMMIT, ROLLBACK, SAVEPOINT, SET TRANSACTION)

Que 2) Write SQL queries in Oracle that demonstrate use of all DCL statements. (GRANT, REVOKE)

Que 3) Write SQL queries in Oracle that demonstrate use of all arithmetic operators.

Que 4) Write SQL queries in Oracle that demonstrate use of all comparison operators.

Que 5) Write SQL queries in Oracle that demonstrate use of all logical operators.

Que 6) Write SQL queries in Oracle that demonstrate use of all set operators.

Que 7) Create table 'Item' by following scenario.

Table: Item		
Column Name	Data type	Size
ino	number	4
iname	char	15
price	number	7,2
qty	number	3

Perform following SQL actions on above table.

- 1) Insert at least 10 records in table.
- 2) List the various items available in item table.
- 3) Add a column "colour" to the Item table with varchar2 data type & size 10
- 4) Rename column 'price' to 'itemprice' in the item table.
- 5) Find the total value of each item. (price * qty).
- 6) Display items with unit price between 300 and 450.
- 7) Sort all items in Descending order by their prices.
- 8) Sort all items in Ascending order by their prices.
- 9) Find the lowest unit price of an item.
- 10) Find the highest unit price of an item.
- 11) Find the average unit price of an item.
- 12) Find the total number of items present in table.
- 13) Find the items whose price is less than 150.
- 14) Display items whose price either 100 or 200.
- 15) Add primary key constraint to 'ino' field;
- 16) Add not null constraint to 'itemprice' field;
- 17) Add check constraint to 'qty' field such that it should not be negative.
- 18) Add default constraint to 'iname' field as 'Dummy'.
