

Assignment No-III

Que-1) Create 'Worker' table and insert records shown in following table.

WORKER_ID	FIRST_NAME	LAST_NAME	SALARY	JOINING_DATE (MM-DD-YYYY)	DEPARTMENT
1	Monika	Aaher	10000	2/20/2014	HR
2	Niharika	Vedpathak	8000	6/11/2014	Admin
3	Vishal	Shinde	30000	2/20/2014	HR
4	Amitabh	Survase	28000	2/20/2014	Admin
5	Vivek	Bhuse	25000	6/11/2014	Admin
6	Vipul	Diwate	20000	6/11/2014	Account
7	Satish	Kulkarni	7500	1/20/2014	Account
8	Geetika	Chavan	9000	4/11/2014	Admin

Perform following SQL actions on above table.

- 1) Display first_name of all workers as column alias name worker_name.
- 2) Display "first_name" of all workers in upper case.
- 3) Display unique departments.
- 4) Print only first three characters of first_name of each worker. (Hint: use SUBSTR())
- 5) Find the position of the alphabet ('t') in the first name 'Amitabh'.
- 6) Display all first names after removing white spaces from the right side. (Hint: use RTRIM())
- 7) Display all last names after removing white spaces from the left side. (Hint: use LTRIM())
- 8) Fetch the unique values of department from worker table and prints its length.
- 9) Print all first_name after replacing 'a' with 'X'.
- 10) Display first_name and last_name into a single column as a "Full_Name".
- 11) Display all worker details by first_name in ascending order and salary in descending order
- 12) Display details of workers without first names, "vipul" and "satish" from worker table.
- 13) Display details of the workers whose first_name contains 'h'.
- 14) Display details of the workers whose first_name ends with 'h' and contains six alphabets.
- 15) Display details of the workers who have joined in feb 2014. (hint: doj>=to_date('01-02-2014','dd-mm-yyyy') and doj< to_date('01-03-2014','dd-mm-yyyy'))
- 16) Delete a "joining_date" column from a table.
- 17) Display the count of employees working in the department 'Admin'.
- 18) Fetch worker names with salaries >= 5000 and <= 20000.
- 19) Display number of workers working in each department.
- 20) Create new table as "emp" from "worker" table.
- 21) Display highest earning salary worker name from "worker" table. (Hint: Use subquery)
- 22) Display lowest earning salary worker name from "worker" table. (Hint: Use subquery)
- 23) Display list of those departments that have less than five workers in it. (Hint: Use having clause)
- 24) Add bonus 1500 rupees in all worker salary. (hint: Use update query)
- 25) Display average salary of each department from a table. (Use group by)
- 26) Find out list of workers whose salary is greater than average salary. (Hint: Use subquery)
- 27) Display list of departments along with the total salaries paid for each worker. (Use group by)
- 28) Increase 1000 rupees salary of that worker who is working in "Account" Department.

Que-2) Create 'Agent_Master' table and insert records shown in following table.

agent_id	agent_name	working_area	commission	phone_no	country
A001	John Smith	New York	100	1234567890	USA
A002	Maria Garcia	Los Angeles	200	2345678901	USA
A003	Akira Tanaka	Tokyo	150	3456789012	Japan
A004	Ravi Kumar	Mumbai	275	4567890123	India
A005	Emma Brown	London	125	5678901234	UK
A006	Chen Wei	Beijing	200	6789012345	China
A007	Ahmed Hassan	Cairo	250	7890123456	Egypt
A008	Luis Martinez	Madrid	300	8901234567	Spain
A009	Sarah Lee	Seoul	250	9012345678	South Korea
A010	Peter Johnson	Sydney	150	123456789	Australia

Perform following SQL actions on above table.

- 1) Display the agent names in uppercase along with their country.
- 2) Show the first 3 characters of each working_area.
- 3) Display agent_name and the length of agent_name.
- 4) Display agent_name where country name ends with 'A'.
- 5) Concatenate agent_name and country as a single string "Agent: <name> from <country>".
- 6) Display agent_name and commission increased by 10%.
- 7) Show agent_name, commission, and the square root of commission.
- 8) Display agent_name and commission rounded to the nearest hundred.
- 9) Display agent_name and commission truncated to the nearest ten.
- 10) Show agent_name, commission, and modulus of commission by 100.
- 11) Find the total commission of all agents.
- 12) Find the average commission of agents.
- 13) Find the maximum and minimum commission from the table.
- 14) Count the total number of agents.
- 15) Find the average commission per country (use GROUP BY).
- 16) Display all agents' names and working areas in ascending order of working_area.
- 17) List agent names and commission in descending order of commission.
- 18) Show all agents sorted by country first (ASC), then by agent_name (DESC).
- 19) Display agent_id, agent_name, and phone_no ordered by length of agent_name (ASC).
- 20) Retrieve agent_id, agent_name, and commission sorted by commission (DESC) and then agent_name (ASC).
- 21) Find the total commission for each country.
- 22) Count the number of agents working in each country.
- 23) Find the average commission of agents in each working_area.
- 24) Display the maximum and minimum commission in each country.
- 25) Find the number of agents whose commission is greater than 200, grouped by country.
- 26) Find the countries having more than 1 agent.
- 27) List working areas where the average commission is greater than 200.
- 28) Find countries where the total commission exceeds 400.
- 29) Show countries where the maximum commission is at least 250.
- 30) Find the working areas having fewer than 2 agents.

Que-3) Write SQL queries in Oracle that demonstrate use of ON DELETE CASCADE clause.
