

Unit 2 :Microsoft Office PowerPoint

A program that allows the user to design a presentation that consists of multiple slides. These slides may contain images, text, video clips, and related types of information.

Different Uses / Applications of PowerPoint :-

There are a lot of effective uses of PowerPoint for play and work. Thus, you can create a PowerPoint presentation for just about any juncture. The Different Uses for PowerPoint are confined only by the imagination; take a look at some of them:

1) PowerPoint to Make Tutorials

For the purpose of training or educational contexts, PowerPoint can be easily used to create worksheets and tutorials.

2) Use PowerPoint Presentations as a Digital collection

If an artist or designer wants to create a polished electronic collection, then with the help of PowerPoint, they can showcase their work by making slides which includes multiple graphics and visual image.

3) Prepare nice Animations using PowerPoint

No doubt, PowerPoint being a valuable tool enables you adding music, sound and effects to your animation. Therefore, you can simply use PowerPoint to make interesting and unique animations. You can also animate elements from the clip art library or from your own drawings.

4) Use PowerPoint as a Photo Slide Show

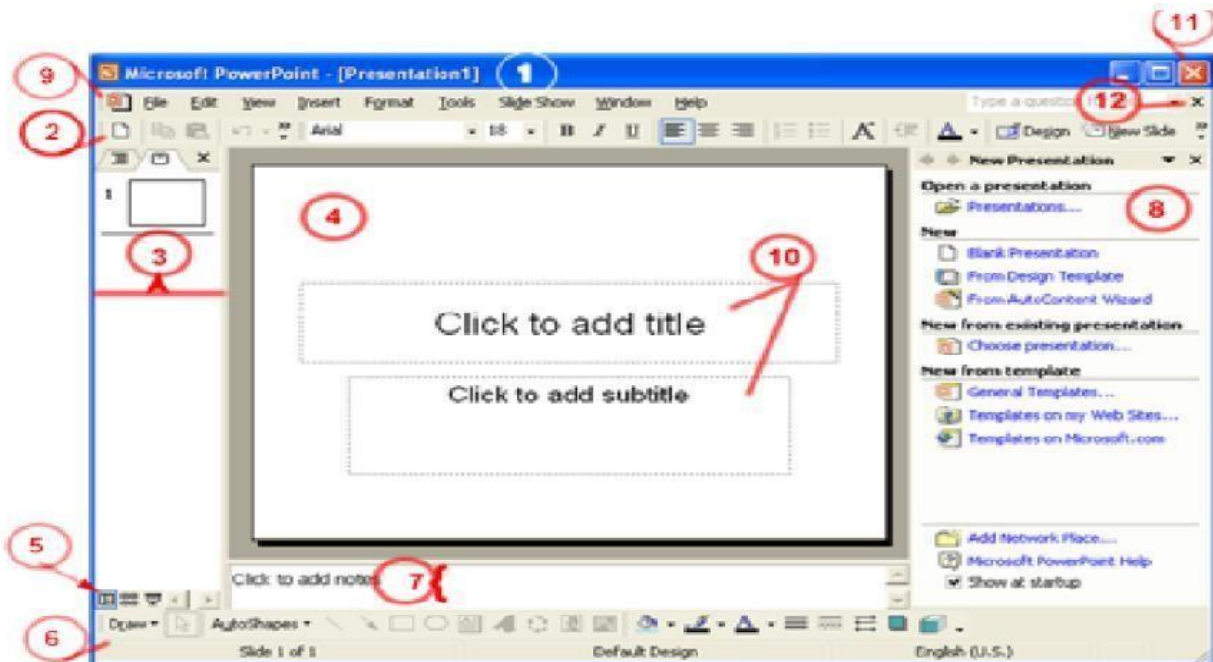

By using PowerPoint, you can create photo slide shows or digital album for personal promotional uses. For instance, you can create a touching tribute to your family member or can also make a fun Presentation featuring childhood photos of newly wedded couple during their wedding reception.

5) Create a Children's Book or a Comic

PowerPoint is one of the easiest visual tools to master for education. Create comedy videos for children's.

Creating and Editing a Presentation

The PowerPoint Window

1. **Title Bar** - Displays the name of the application followed by the title of the presentation
2. **Formatting Toolbar** - Provides quick access to commands you need for formatting
3. **Outline and Slides Tab** - The slides tab gives you a thumbnail view of all the slides in the presentation and allows to rearrange their order; the outline tab adds textual content to the slides in an outline format
4. **Slide Pane** - Area where you build the slides for your presentation
5. **View Buttons** - Change the way you view the presentation; the Normal view (left button) is the default, the Slide Sorter view (center button) shows you only the thumbnails and is used to sort and rearrange the presentation, and the Run view (right button) runs the presentation from the current slide
6. **Drawing Toolbar** - Provides all the tools you need to draw and format objects
7. **Notes Pane** - Adds notes for yourself for each slide in your presentation
8. **Task Pane (Windows version)** - Varies based on what you are currently working on; when you first start PowerPoint, you see the New Presentation task pane; other possible tasks include Slide Layout, Slide Design.
9. **Menu Bar** - Includes all of the PowerPoint menu choices
10. **Placeholders** - Designate the space that will be filled with titles, text, or other objects such as graphics or charts
11. **Application Close Button (Windows Version)** - Exits PowerPoint
12. **Presentation Close Button (Windows version)** - Closes the current presentation

Presentation: Opening New Presentation

Create a New Presentation Using a Blank Presentation

1. If necessary, chose **File > New** to display the **New Presentation** pane
2. On the **New Presentation** pane, click on the **Blank Presentation** link

Different presentation templates:

Microsoft PowerPoint offers a wide variety of templates that can be used for different types of presentations. These templates provide predefined designs, layouts, and color schemes to help users quickly create professional-looking slides. Below are different categories of templates that you can find in PowerPoint:

1. **Business Templates**
2. **Educational Templates**

3. **Creative & Design Templates**
4. **Minimalist & Modern Templates**
5. **Info graphics Templates**
- 6 **Technology Templates.**
7. **Health & Medical Templates**
8. **Scientific & Academic Templates etc.**

Setting backgrounds:

Setting a background in MS- PowerPoint is to customize your slides

You can set a background in PowerPoint there are following steps:

Open your PowerPoint presentation.

2. Select the slide where you want to change the background.
3. Go to the "Design" tab at the top of the screen.
4. In the "Customize" group, click on "Format Background".
5. A panel will appear on the right side with different background options:

Solid Fill: Choose a color from the palette, or select "More Colours" for a custom color.

Gradient Fill: Choose from pre-set gradients or customize the colors and gradient type (linear, radial, etc.).

6. Once you've selected your preferred background, you can click Apply to all if you want the background to appear on all slides, or just leave it for the current slide.

Selecting presentation layout: When selecting a presentation layout, there are several factors to consider, including your content, audience, and the flow of information. Here are some common layout types

1. Title Slide

It introduce the presentation topic, present the title, and speaker's name. It is use at the beginning of your presentation.

2. **Outline Slide:** It introduce the overview of the presentation structure. It is used to set expectations for what's coming.

3. **Bullet Point Slide:** It represents list of items. It is used to create list of ideas, steps.

4. **Image Based Slide:** It shows the visual element, such as a photo, chart, or graph. It is used when your message is better communicated visually.

5. **Comparison Slide:** It is used to compare two or more concepts, products, or ideas side by side. It has Use tables, side-by-side images, bullets.

6. **Closing/Thank You Slide:** It is used at the end of your presentation.

Creating a presentation:

Setting Presentation style: Setting the presentation style in Microsoft PowerPoint involves adjusting various design elements to create a consistent and professional look for your slides. Following different presentation style used in MS-Power point.

1. Choose a Theme

1. Go to the "Design" tab on the Ribbon.
2. Browse through available Themes and click to apply the one you like.
3. Each theme automatically adjusts the colors, fonts, and background design.

2. Customize the Theme (Colors, Fonts, Effects)

1. **Colors:** Under the "Design" tab, click **Variants**, then select **Colors** to pick a color palette or create your own.
2. **Fonts:** Similarly, under **Variants**, click **Fonts** to select a different font pair or customize your own.
3. **Effects:** You can also adjust the visual effects for shapes, text, and other elements under the **Variants** dropdown.

3. Set the Background

1. Right-click on a slide and choose **Format Background**.
2. You can choose from a solid fill, gradient fill, picture or texture fill, or pattern fill.
3. Select **Apply to All** to set the background for the entire presentation.

Adding a new slide

Once you have opened a new presentation, the next step is to add and format the content. PowerPoint provides a selection of pre-defined slide layouts based on different types of content that you can use to quickly add content to the slides.

How to Add Slides to a Presentation

1. Click the New Slide button on the Formatting toolbar.
2. From the list of Slide Layouts, select the layout you want to apply to the new slide.
3. You may now begin adding content using the placeholders in the layout.

Adding Text in Presentation

Enter Text on a Slide Using Placeholders

1. Click on the **Title**, **Subtitle**, or **Text** placeholder.
2. Type the text you want.
3. If necessary, press **[Return]** or **[Enter]** to move to a new line.
4. Click anywhere on the slide outside of the placeholder to deselect it.

Formatting a Presentation: Adding style To add styles in PowerPoint, you can apply formatting to text, shapes, backgrounds, and other elements to make your presentation visually appealing and consistent. Here's a step-by-step guide on how to add styles in PowerPoint:

1. Text Styles

To apply text styles (fonts, sizes, colors, effects, etc.) to your slides:

Select the Text Box or Text: Click on the text box or highlight the text you want to style.

Change Font:

1. Go to the **Home** tab.
2. In the **Font** group, choose the font style, size, and color.

Text Effects:

1. Click on the **Text Effects** button (a blue "A" with a glow effect) in the **Font** group.
2. Select effects like shadow, glow, reflection, and more.

Text Alignment:

1. Use the **Align Text** button (found in the **Paragraph** group under the **Home** tab) to adjust vertical and horizontal alignment

Using Slide Layouts

To change the structure of individual slides:

1. Go to the **Home** tab.
2. Click **Layout** in the **Slides** group to choose a predefined layout (like Title Slide, Title and Content, etc.) for your slide.
3. Customize each layout with your preferred styles.

Background Styles

1. **To style your slide backgrounds:**
2. Select the slide or slides you want to change the background for.
3. Go to the **Design** tab.
4. Click on **Format Background**.
5. Choose from **Solid Fill**, **Gradient Fill**, **Picture or Texture Fill**, or **Pattern Fill**.
6. Apply the background to individual slides or all slides by clicking **Apply to All**.

Adding Header and Footer: Step 1 – In the **Insert** ribbon, click on the **Header & Footer** menu item.

Step 2 – The **Header and Footer** dialog has two tabs — the **Slide tab** and the **Notes and Handouts tab**.

Step 3 – You can add details to the slide footer from the **Slide tab**.

Inserting Clip Art :-

Effective visuals highlight the key content points in a presentation. PowerPoint provides a selection of professionally designed pictures, or clip art, that you can use in your presentations. These clip art images include many different themes such as animals, people, buildings, food, holidays, business, and more.

To insert a clip art image into a presentation:

1. Select the **Insert** tab
2. Click the Clip Art command from the Illustrations group to open the Clip Art task pane
3. Enter a search term in the Search for: text field
4. Click the **Go** button
5. Click the desired image and the graphic will be inserted into the middle of your slide

To insert a picture from the Ribbon:

- Select the **Insert** tab.
- Click the **Insert Picture** command in the **Illustrations** group. The Insert Picture dialog box will appear.
- Locate and select the picture you want to use.
- Click **Insert**, and it will appear on the slide.

To insert Table in presentation

- Select the **Insert** tab.
- Click on the Table **command** in the **Tables** group.
- Select Row and Column
- Selected row and Column it will appear on the slide

Working with Shapes and Objects

An **object** is any shape, text box, Smart Art, Word Art, picture or Clipart that can be manipulated as a single item. Specifically, a **shape** is a basic object that can be placed on a slide such as a callout, a circle, an arrow, a square, and so on.

To insert a shape into your PowerPoint presentation, use the **Shapes** Command in the **Illustrations** group on the **Insert** tab.

Drawing Pictures using Draw - Provides all the tools you need to draw and format objects.

Master Slides

A master slide is one that is a part of every presentation that controls certain text characteristics such as font type, size, and color, as well as background color and style. Masters can affect all the slides in a presentation. There are masters that control the title slide, notes pages, and handout pages. When you apply a template to a presentation, you apply a new set of masters that control the presentation's look and format. There are four types of masters used in PowerPoint, as described below.

Type of Master

Slide Master: - The Slide Master is an element of the design template that stores information about the template, such as font styles, placeholder sizes

and locations, background design, and color schemes.

Title Master: - The Title Master is used to make changes to slides in your presentation that use a Title Slide layout. This enables you to give a title slide a different look from the rest of your presentation.

Notes Master: - The Notes Master is used to set the formatting for your notes pages. You can set headers, footers, and the Notes Body area.

Handout Master: - The Handout Master is used to set the formatting of your handouts pages. You can set headers, footers, and the size and positioning of the number of handouts per page.

Slide Masters are used to create consistent layouts throughout your presentation. Using masters you can format titles, backgrounds, colors, dates, times, and slide numbers. Changes made to the Master Slide and the Master Layouts are applied to all slides with that layout.

Adding Graphics to the Presentation: Inserting Graphics in presentation

One element you can add to every slide is a graphic of some sort. To add a graphic to one or all slides:

1. Display an individual slide or the Slide Master for all slides.
2. Choose Insert > Picture > From File.
3. Navigate to the folder that contains the picture that you wish to insert.
4. Select the picture file.
5. Click Insert.

Giving Animation Effects :-

Animate the text or objects in your presentation to give them sound effects or visual effects, including movement. You can use animation to focus on important points, to control the flow of information, and to increase viewer interest in your presentation

Objects and Animation	
Animation Tab 	
Create custom animation effects for objects	Animation Tab >> Animations >> Custom Animation • When you choose the Custom Animation Tool, the Custom Animation panel appears on the right-hand side of the current slide. • Select the object to which you want to apply animation • Click the Add Effect button and choose an animation style. ◦ Frequently-used effects are found in "Entrance" styles in the menu • Click the Play button to preview the animation. 

Animate the object by completing the following steps:

1. Click to select object
2. Click animation effect button on formatting toolbar to open animation effects toolbar
3. Click custom animation button on animation effects toolbar.
4. Make sure the effects tab is selected in custom animation dialog box
5. Click the down pointing arrow to the right of entry animation and sound text box.
6. Select the swivel effect
7. click the preview button at the top right of dialog box and watch the animation effect in preview button
8. Click ok
- 9 click the close button on animation effects toolbar.

Generating Standalone presentation Viewer

1. Click outside the object to deselect it.
2. Click the slide show button at the left edge of horizontal scroll bar
3. The text for slide screen in slide show view.
4. Click the left mouse button to display the object with swivels animation effect
5. When the animation effect is complete click the left mouse button to return to slide view.

Print Handouts:

Printing handouts in PowerPoint is a great way to provide a summarized version of your presentation to your audience. Here's how you can print handouts in PowerPoint.

- Open **your PowerPoint presentation**.
- Click on the **File** tab in the top-left corner.
- Select **print** from the menu on the left (this opens the print settings).
- In the **Print** dialog box, under the **Settings** section:
- Click on the **Slides** drop-down menu (which defaults to printing full slides).
- From the drop-down menu, choose **Hand-outs**.

You'll have different options for how many slides you want per page:

- **1 Slide per Page** (default) ,**2 Slides per Page**,**3 Slides per Page**,**4 Slides per Page**,**6 Slides per Page**,**9 Slides per Page**.
- Once you've selected the number of slides per page, adjust other settings like the **printer** and **orientation** (Portrait or Landscape).
- Click on the **Print** button to start printing your hand outs.

Hyperlink:- Link one file to another file .

Examples of hyperlinks can be to a web site, another slide in the presentation, another file, a graphic, a sound file, a movie, email, and several others options.

Make a Hyperlink

- Select the text you wish to by a hyperlink.
- Click the **Insert** tab.
- Click on **Hyperlink** and select particular file then click on **OK**.

Action Button :-

Creating a Hyperlink using an Action Button

An Action button is an object that can be drawn on a PowerPoint slide and then set up as a hyperlink. The Action Shapes are located on the Insert Tab, Shapes icon drop down menu. From the Shapes drop down menu, select the appropriate Action Button for the slide .Once the shape has been drawn, the Action dialog box will display for hyperlink options.

Action Settings

Under "*Action on click*" click on *Hyperlink to*:

1. Choose the destination slide for the link

2. Click on OK when finished.
