

SANGOLA COLLEGE, SANGOLA
Department of Computer Science & Application
Class-B.Sc(ECS)-I, SEM-I Journal Assignments
Sub- Python Programming-I

Assignment No-I

- 1) To find addition, subtraction, multiplication, division of two numbers.
- 2) To find average of three numbers.
- 3) To calculate area of Circle.
- 4) To calculate Perimeter (Circumference) of Circle.
- 5) To calculate area of triangle.
- 6) To calculate area of rectangle.
- 7) To calculate area of square.
- 8) To create table of given number.

Assignment No-II

- 1) To implement if, if—else, nested if—else and elif--else statement.
- 2) To implement for and while loop.
- 3) To generate electricity bill by using elif-else statement.
- 4) To calculate library fine amount by using elif-else statement.
- 5) To check entered number is positive or negative.
- 6) To find minimum number between two numbers.
- 7) To find maximum number between two numbers.
- 8) To find minimum number between three numbers.
- 9) To find maximum number between three numbers.
- 10) To check entered number is Even or Odd.
- 11) To find out Odd numbers between 1 to given number
- 12) To find out Even numbers between 1 to given number

Assignment No-III

- 1) To find factorial of entered number.
- 2) To find digit sum of entered number.
- 3) To check entered number is Armstrong or not.
- 4) To find out Armstrong numbers between 1 to given number
- 5) To find reverse number of entered number.
- 6) To check entered number is Palindrome or Not.
- 7) To find out Palindrome numbers between 1 to given number
- 8) To check entered number is perfect or not.
- 9) To find out perfect numbers between 1 to given number
- 10) To check entered number is strong or not
- 11) To find out strong numbers between 1 to given number
- 12) To find out Fibonacci series up to given numbers
- 13) To implement break, continue, pass, assert statements
- 14) To implement getting multiple inputs from user by using single input function.
- 15) To print the following patterns.

Assignment No-IV

Implement following programs by using command line

- 1) Calculate the sum of all arguments passed
- 2) Calculate the average of all arguments passed

Edit with WPS Office

- 3) Find out the armstrong, palindrome, strong, prime number from passed arguments

Assignment No-V

- 1) To implement all operations on string.
- 2) To implement all operations on a 1-D array.
- 3) To implement all operations on a 2-D array
- 4) To implement all operations on a list
- 5) To implement all operations on a tuple
- 6) To implement all operations on a set
- 7) To implement all operations on a dictionary

Assignment No-VI

Q.1 Implement menu driven programs by using function.

- 1) Perform arithmetic operations
- 2) Calculate area of triangle, rectangle, circle, square, circumference of circle
- 3) To check given number is palindrome, strong, armstrong, odd, even, prime, perfect, reverse a given number

Q.2 To implement global, local, nonlocal variables/ keywords

Q.3 To implement *args, **kwargs

Q.4 To implement returning multiple values from function

Q.5 To find out factorial of given number by using recursion

Q.6 To implement lambda function

Q.7 To implement filter(), map(), reduce() function

Q.8 To implement nested function

Q.9 To implement type(), split(), id() functions
