Paper- SEC1 Introduction to Python Programming

Question Bank

Q.2) Answers any four of the following. (2 marks for each question)

- 1) Define module.
- 2) Define Default Constructor
- 3) Define list with example
- 4) Define search () Function
- 5) Define class method
- 6) Write down syntax for range() function
- 7) Define module
- 8) Define static Method
- 9) Write down syntax for tuple declaration
- 10) List out various data types in python
- 11) Define Instance Method
- 12) What are Formal parameters?
- 13) Write use of input() function with example
- 14) Define Inheritance?
- 15) Define Lambda function
- 16) Write use of pass keyword with example
- 17) What are Actual parameters?
- 18) Write down syntax of Creating a Function
- 19) Define dictionary
- 20) Write down syntax for dictionary declaration

Q. 3) Write short notes on any two of the following. (4 marks for each question)

- 1) Characteristics of python
- 2) Write a program to check given number is palindrome or not
- 3) Explain various manipulations on tuple
- 4) Explain read(), readlines() methods
- 5) Write a program to check large number between three numbers
- 6) Constructors in python
- 7) Explain all numeric data types used in python
- 8) What is String? Explain any 4 manipulations of String with example
- 9) Explain write(), writelines() methods

10)What is Tuple? Explain any 4 manipulations of Tuple with example

Q. 4) Answers any two of the following. (4 marks for each question)

- 1) Explain abstract class and abstract method
- 2) Explain random module
- 3) Write a program to implement hierarchical inheritance
- 4) Explain time module
- 5) What is exception? Explain at least 3 in built exceptions in python
- 6) Define regular expression. Explain various metacharacters
- 7) Explain types of methods in python.
- 8) Explain math module
- 9) What is a Namespace in Python? Explain in detail.
- 10) Explain try...finally block with example

Q.5). Answer any one of the following. (8 marks for each question)

- 1) Explain Operator precedence and associativity in python
 - 2) Define file. Explain various file operations
 - 3) List decision making statements, write a program by using nested if–else to find large number between three numbers
 - 4) What are the directory. Explain various operations on directory
 - 5) Write a program to find out given number is positive/negative odd/even
-
