

B.Sc(ECS)-I
Sub- Python-II
Practical Assignments
Assignment No-1

Q. Implement following programs

- 1. Create a simple module**
- 2. Create a package**
- 3. Create sub package**
- 4. Implement methods of math module**
- 5. Implement methods of random module**
- 6. Implement methods of time module**
- 7. Implement a program which shows various ways to import module**

Assignment No-2

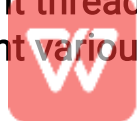

Q. Implement following programs

- 1. Implement simple class and object**
- 2. Implement various types of methods**
- 3. Implement various types of variables**
- 4. Implement abstract class and abstract method**
- 5. Implement super class and super() method**
- 6. Implement method overriding**
- 7. Implement method and constructor overloading**
- 8. Implement operator overloading (implement all groups of operator)**
- 9. Implement all types of inheritance**
- 10. Implement interface**
- 11. Implement nested class**
- 12. Implement a program for passing member of one class to another class**
- 13. Implement method and constructor by using default arguments**

Assignment No-3

Q. Implement following programs

- 1. Implement simple thread**
- 2. Implement multithreading**
- 3. Implement thread by three ways**
- 4. Implement thread synchronization**
- 5. Implement various thread class methods**

Assignment No-4

Q. Implement following programs

1. Implement try, except, and finally block
2. Implement raise keyword
3. Implement user defined exception
4. Implement expectation handling with else block
5. Implement multiple except blocks with single try block

Assignment No-5

Q. Implement following programs

1. Perform following operations on text and binary file
 - a. read.
 - b. write.
 - c. append
2. Perform following operations on text and binary file by using with statement
 - a. read.
 - b. write.
 - c. append
3. Perform following operations on binary file.
 - a. Insert.
 - b. Display.
 - c. Search.
 - d. Update/Modify.
 - e. Delete
4. Implement seek () and tell() methods
5. Implement file pickling and unpickling
6. Implement file zipping and unzipping
7. Implement all operations on directory
