Assignment No – 3

1) Consider following scenario to solve by using algorithm

| Process | Priority | Arrival Time | Running Time |
|---------|----------|--------------|--------------|
| A       | 3        | 0            | 7            |
| B       | 2        | 1            | 4            |
| C       | 1        | 1            | 2            |
| D       | 5        | 2            | 5            |
| E       | 4        | 4            | 6            |

1) Using FCFS algorithm

2) Using SJF with Non-Preemptive Mode.

3) Using Priority Scheduling Algorithm (Non-Preemptive Mode)  
(Criteria lesser no higher priority)

2) Consider following scenario to solve by using algorithm

| Process | Priority | Arrival Time | Burst Time |
|---------|----------|--------------|------------|
| P1      | 5        | 0            | 6          |
| P2      | 4        | 1            | 2          |
| P3      | 3        | 3            | 1          |
| P4      | 1        | 3            | 2          |

- 1)Using FCFS algorithm
- 2)Using SJF with Non-Preemptive Mode.
- 3)Using Priority Scheduling Algorithm (Non-Preemptive Mode)  
(Criteria higher no lower priority)

3) Consider following scenario to solve by using algorithm

| Process | Priority | Arrival Time | CPU Time |
|---------|----------|--------------|----------|
| P1      | 3        | 0            | 8        |
| P2      | 4        | 1            | 2        |
| P3      | 4        | 3            | 4        |
| P4      | 5        | 4            | 1        |
| P5      | 2        | 5            | 6        |
| P6      | 6        | 6            | 5        |
| P7      | 1        | 10           | 1        |

- 1)Using FCFS algorithm
- 2)Using SJF with Non-Preemptive Mode.
- 3)Using Priority Scheduling Algorithm(Non-Preemptive Mode)  
(Criteria Lesser no higher priority)
